### MEDICAL TRAINING IMPACTED BY COVID IN 2021

More than 21,000 trainees have spoken, and the 2021 Medical Training Survey (MTS) has given the rest of us a fantastic opportunity to listen.

A huge thanks to every doctor in training who made time to do the 2021 MTS, despite intense COVID-related pressures this year. The 55 per cent response rate has generated a solid evidence base and a robust national dataset that will continue to shape improvements to training.

The results show the impact of COVID-19 on training and give insights into the quality of training and the culture of medicine. While results are broadly consistent with previous years, there are small but statistically significant changes. Broadly, there is a lot going well in medical training and some important issues that require attention.

Through the 2021 MTS, we know that 100% of trainees have a supervisor, 94% received an orientation and 80% would recommend their current training position to other trainees.

All aspects of the quality of supervision have improved since last year and trainees report receiving more regular and more useful feedback, both formal and informal.

There were also some small but statistically significant downward variations in results. These may relate to the impact of the pandemic on the healthcare sector and warrant close monitoring in the years ahead.

Perhaps unsurprisingly, trainees from places hit hardest by the pandemic reported that their medical training overall had been impacted negatively, while trainees in states and territories less COVID-affected reported that the pandemic had a mixture of positive and negative impacts on training overall. Broadly, 41% of respondents indicated COVID-19 had negatively impacted their medical training this year.

Similar to 2020, survey participants continued to report greater competition with other doctors for training opportunities. This was greater for prevocational and unaccredited trainees with 56% strongly agreeing/agreeing that they had to compete with other doctors for training opportunities, compared to 36% of interns.

We note that 45% of trainees say they 'never/sometimes' got paid for un-rostered overtime, and 49% rated their workload as heavy/very heavy.

Again this year, trainees have called out workplace culture as a serious issue. In 2021, 35% of trainees reported that they had experienced and/or witnessed bullying, harassment and/or discrimination (including racism) in training, which is no improvement on the 2020 results,

where 34% of trainees reported experiencing and/or witnessing bullying, harassment and/or discrimination.

The most common groups responsible for the bullying, harassment and/or discrimination were senior medical staff (experienced=51%, witnessed=54%), nurses/midwives (experienced=36%, witnessed=41%) and patients/carers/families (experienced=36%, witnessed=38%). 67% of trainees who experienced these behaviours did not report the incident and only 58% of trainees who reported it were satisfied with the follow-up.

Answers to a new question in 2021 show a clear link between unprofessional behaviours and medical training, with 38% of trainees who experienced bullying, discrimination or harassment reporting moderate or major impacts on their training.

Disturbingly, there is a significant and unacceptable difference in the incidence of these issues reported by Aboriginal and Torres Strait Islander doctors in training. Results show that 52% of Aboriginal and Torres Strait Islander trainees reported experiencing and/or witnessing bullying, harassment and or discrimination (compared with 35% of trainees nationally), and of those experiencing bullying, harassment and or discrimination, 49% reported a moderate or major impact on their training (compared with 38% nationally).

More Aboriginal and Torres Strait Islander trainees who experienced these unprofessional behaviours reported the issue (43% compared with 33% nationally). Racism in healthcare is never acceptable and we all have to do better.

As ever, a huge team effort underpins this result. We are grateful to each doctor in training who shared their story on social media to help boost participation rates. A big thank you to the agencies across the healthcare sector who backed and promoted the 2021 MTS, and to the members of the MTS Steering Committee and Advisory Group whose expertise and enthusiasm were invaluable.

Increasingly, agencies across the healthcare sector are using MTS results to improve medical training. All results are available online through the data dashboard published on the [MedicalTrainingSurvey.gov.au](https://www.medicaltrainingsurvey.gov.au) website. Interrogate the results, tailor your own report, and apply this valuable data-set to continually drive improvement in medical training.

## Background

### INTRODUCTION

The Medical Training Survey (MTS) is a national, profession-wide survey of doctors in training in Australia. It is a confidential way to get national, comparative, profession-wide data to strengthen medical training in Australia. The MTS is conducted annually with doctors in training, with 2021 representing the third wave of data collection.

The objectives of the survey are to:

- promote better understanding of the quality of medical training in Australia

- identify how best to improve medical training in Australia, and
- identify and help deal with potential issues in medical training that could impact on patient safety, including environment and culture, unacceptable behaviours and poor supervision.

The Australian Health Practitioner Regulation Agency (Ahpra), on behalf of the Medical Board of Australia (the Board), commissioned EY Sweeney to undertake data collection and report on results for the MTS.

### METHOD

Data collection for the MTS involved receiving responses to an online survey from  $n = 21,604$  doctors in training, with  $n = 20,671$  responses eligible for analysis (i.e. currently training in Australia) between 22 July and 8 October 2021.

Different versions of the survey were used to reflect the particular training environment of doctors who are at different stages in their training. Doctors in training answered questions about their experiences in their workplace. This could be the doctor in training's current setting, workplace, placement or rotation, or might be a previous setting, if they have only been practising or training in their current setting for less than two weeks.

For this report, results for Queensland (Qld) are presented at an overall level. To explore results within Qld further, please visit [medicaltrainingsurvey.gov.au/results](https://medicaltrainingsurvey.gov.au/results).

### INTERPRETING THIS REPORT

This report provides key results based on  $n = 4,351$  doctors in training working in locations across Qld compared against national results ( $n = 20,671$ ) of all eligible doctors in training (i.e. currently training in Australia).

Bases exclude 'not applicable' responses or where the respondent skipped the question. Data in this report are unweighted. Labels on stacked charts are hidden for results 3% or less. Results with base sizes of less than  $n = 10$  are suppressed.

Data percentages displayed throughout the report are rounded to the nearest whole number. As such, if there is an expectation for a given chart or table that all percentages stated should add to 100% or nets should equal to the sum of their parts, this may not happen due to rounding.

#### My plan is preparing me for future medical practice

#### My plan is advancing my knowledge

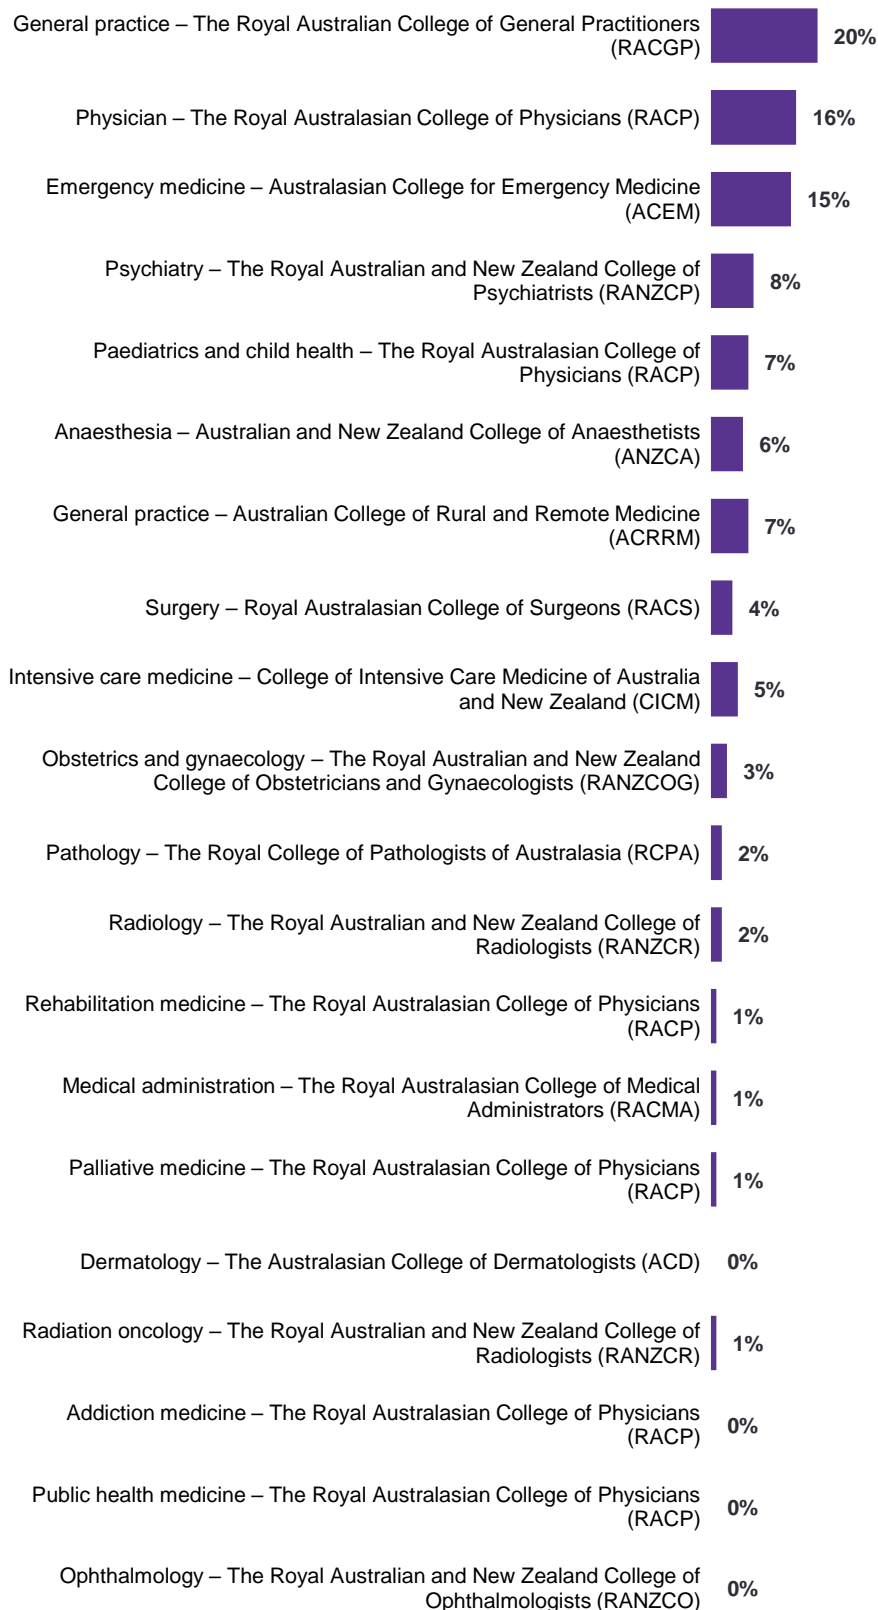

**Key:** ■ Strongly agree ■ Agree ■ Neither agree nor disagree ■ Disagree ■ Strongly disagree

Base: IMGs with a training/professional development plan. National response is filtered to IMGs with a training/professional development plan.

\*Note: This question was only asked of IMGs.

Q13. Thinking about your training / professional development plan, to what extent do you agree or disagree with the following statements?

## Orientation

### DID YOU RECEIVE AN ORIENTATION TO YOUR SETTING?

Doctors in training were asked questions about their experiences in their workplace. This could be the doctor in training's current setting, workplace, placement or rotation, or might be a previous setting, if they had only been practising or training in their current setting for less than two weeks.

Base: Total sample (National: 2021 n = 19,447; Qld: 2021 n = 4,088)

Q27a. Did you receive an orientation to your setting?

### HOW WOULD YOU RATE THE QUALITY OF YOUR ORIENTATION?

As shown in the chart above, 95% of Qld trainees had an orientation in their current setting (compared to the national response of 94%).

73% of Qld trainees rated the quality of the orientation as either 'excellent' or 'good', compared to the national response of 74%.

**Key:** ■ Excellent ■ Good ■ Average ■ Poor ■ Terrible

Base: Received an orientation

Q27b. How would you rate the quality of your orientation?

## Assessment - Interns

### IN THE LAST TERM THAT YOU COMPLETED, DID YOU RECEIVE AN END OF TERM ASSESSMENT?

Base: Interns (National: 2021 n = 1,119 ; Qld: 2021 n = 247)  
 Q26a. Did you receive an assessment for your previous rotation?

### ASSESSMENT ADMINISTRATION FROM PREVIOUS ROTATION...

#### Was relevant to my training

#### Included an opportunity to discuss feedback with my supervisor

#### Provided me with useful feedback about my progress as an intern

#### Was conducted fairly

Key: Strongly agree (Purple), Agree (Blue), Neither agree nor disagree (Green), Disagree (Orange), Strongly disagree (Red)

Base: Had an assessment
