2022 MEDICAL TRAINING SURVEY

The Medical Training Survey (MTS) is proving to be an invaluable diagnostic tool, shining a light on the state of medical training in Australia.

With 56% of trainees sharing their insights in the 2022 MTS, there is a robust evidence base to inform ongoing improvements in training.

Each year, MTS results signal both what's going well in training and issues to watch. Trends are visible early, enabling close monitoring or swift action by agencies best placed to respond and effect positive change.

There is still a lot going well in medical training, some important issues that require attention and some early trends to monitor closely.

The culture of medical training needs attention. It is totally unacceptable that 55% of Aboriginal and Torres Strait Islander trainees experienced and/or witnessed bullying, harassment, discrimination and racism. It is inexcusable that 34% of all trainees did. The 1% variation from last year in the overall rate reported is not statistically significant and sets a baseline for a problem that demands action.

The source of bullying, harassment, discrimination and racism changed in 2022, with an increase in patients and or family/carers identified as the source of the incident (up from 38% in 2021 to 45% in 2022). This is an important issue to watch and may point to frustrations with a health system under pressure.

A new question about reasons for not reporting concerns about bullying, harassment, discrimination and racism proved its value. We no longer have to speculate that trainees are concerned about the consequences of reporting, we know this is true. Of those who had experienced bullying, harassment, discrimination and/or racism, 70% did not report it. Of these trainees, 55% were concerned about the repercussions, and 51% said nothing would be done if they did make a report.

Fault lines in the culture of medicine revealed by the MTS warrant ongoing, collaborative solutions from agencies across the health sector. The Board will continue the policy and professional standards work that will underpin sector wide action, in collaboration with the frontline organisations who hold the keys to lasting cultural change.

There has been a 7% increase (to 53%) in the number of trainees who rated their workload as heavy/very heavy

since the pandemic started in 2020. On the upside, this year's results reveal an increase in the number of trainees getting paid for their overtime.

The COVID-19 pandemic continued to impact on training in most areas, but slightly differently from the previous year. In 2022, workload was adversely affected, while exam preparation and training opportunities were largely impacted in 2021.

We are delighted that the participation rate for Aboriginal and Torres Strait Islander trainees increased from 158 in 2021 to 191 in 2022. The MTS has given us all an important opportunity to listen to and act on the feedback from these trainees, as we move towards providing culturally safe and appropriate medical training and more broadly, culturally safe medical care.

Other small changes indicate there was a dip in the quality of teaching in 2022, and a drop in the number of trainees who would recommend their current training position or organisation (from 80% in 2021 to 78% in 2022) to others.

More trainees are considering a future outside of medicine (up from 18% in 2021 to 20% in 2022). Disturbingly, at 29% this rate is higher for Aboriginal and Torres Strait Islander trainees.

Australia continues to deliver high quality medical training, producing doctors who provide high quality medical care to patients in this country.

However, MTS results suggest that in 2022, things were not quite as good in medical training as they have been in previous years. Qualitative research and analysis would be needed to definitively understand the reasons for this, but it is possible that broader, pandemic-related health system pressures are adversely affecting medical training. Through the MTS, the health sector has been given early warning about issues to address. We all owe it to trainees to act.

Dr Anne Tonkin
Chair, Medical Board of Australia

Background

INTRODUCTION

The Medical Training Survey (MTS) is a national, profession-wide survey of doctors in training in Australia. It is a confidential way to get national, comparative data to strengthen medical training in Australia. The MTS is conducted annually with doctors in training, with 2022 representing the fourth wave of data collection.

The objectives of the survey are to:

- promote better understanding of the quality of medical training in Australia
- identify how best to improve medical training in Australia, and

- identify and help deal with potential issues in medical training that could impact on patient safety, including environment and culture, unacceptable behaviours and poor supervision.

The Australian Health Practitioner Regulation Agency (Ahpra), on behalf of the Medical Board of Australia (the Board), commissioned EY Sweeney to undertake data collection and report on the results for the MTS.

METHOD

Data collection for the MTS involved receiving responses to an online survey from $n = 23,083$ doctors in training, with $n = 22,135$ responses eligible for analysis (i.e. currently training in Australia) between 28 July and 8 October 2022.

Different versions of the survey were used to reflect the particular training environment of doctors who are at different stages in their training. Doctors in training answered questions about their experiences in their workplace. This could be the doctor in training's current setting, workplace, placement or rotation, or might be a previous setting, if they have only been practising or training in their current setting for less than two weeks.

For this report, results for Queensland (Qld) are presented at an overall level. To explore results within Qld further, please visit medicaltrainingsurvey.gov.au/results.

INTERPRETING THIS REPORT

This report provides key results based on $n = 4,560$ doctors in training working in locations across Queensland compared against national results ($n = 22,135$) of all eligible doctors in training (i.e. currently training in Australia).

Bases exclude 'not applicable' responses or where the respondent skipped the question. Data in this report are unweighted. Labels on stacked charts are hidden for results 3% or less. Results with base sizes of less than $n = 10$ are suppressed.

Data percentages displayed throughout the report are rounded to the nearest whole number. As such, if there is an expectation for a given chart or table that all percentages stated should add to 100% or nets should equal to the sum of their parts, this may not happen due to rounding.
