#### 2024 MEDICAL TRAINING SURVEY

Medical Training Survey data is getting richer each year.

Since 2019, trainees have been using their voice, in their survey. Through the MTS, they are highlighting what is going well in medical training in Australia and safely calling out where action is needed.

There is much to learn from rich MTS data and the 2024 headline results are interesting and important. There are also gems beneath the surface, clearly visible through tailored searches in the online data dashboard. 2024 results will be accessible in searchable form in early 2025 on the MedicalTrainingSurvey.gov.au website.

With strict confidentiality rules in place to protect trainees, the MTS online searchable database can reveal meaningful insights. Use it to compare trainees' feedback by specialty and jurisdiction. Take a deep dive into the culture of training, and make comparisons across sites.

There is a lot of stability and good news in the 2024 MTS results. The national quality of trainee supervision, orientation, teaching, education and training on patient safety is again high.

Worryingly, 29% of Aboriginal and Torres Strait Islander trainees and about 19% of all trainees are considering a career outside of medicine.

Unacceptably, again, one third of trainees (33%) reported having experienced or witnessed bullying, discrimination, harassment, sexual harassment or racism, spiking to 54% of Aboriginal and Torres Strait Islander trainees and 44% of interns. Around 70% of trainees reported that this impacted negatively on their training.

Aboriginal and Torres Strait Islander trainees report experiencing or witnessing racism at more than double the rate of other trainees: 38% compared to 17% of other trainees. There is no place for this in any civil community.

Within these data, there is nuance. The source of reported unprofessional behaviour varies between groups of trainees. For GP trainees (49%) and interns (54%), patients and their families were the most common source of unprofessional behaviour, anchoring deficits in the culture of medicine firmly in the context of wider community attitudes and behaviours. With robust evidence generated by trainees in the MTS, comes knowledge and the ability to develop effective strategies for change.

We are pleased that in 2024, 203 Aboriginal and Torres

Strait Islander trainees took part in the MTS. This is nearly a third of all registered Aboriginal and Torres Strait Islander medical practitioners and, it seems, a very healthy proportion of all Aboriginal and Torres Strait Islander trainees. We thank the Australian Indigenous Doctors Association (AIDA) for their work with trainees to build trust and confidence in the MTS. With a strong evidence base, action can flow.

Again in 2024, new MTS questions generated new insights:

- 81% of interns reported that their medical school prepared them well for medical training
- More than 1,000 trainees (5%) told us they had experienced/witnessed sexual harassment
- 62% of trainees agreed/strongly agreed that the financial cost of their College training program had led to stress
- 16% of trainees agreed/strongly agreed that the cost of their College training program had been a barrier to their progressing in the training program.

On flexible training, 68% of trainees agreed/strongly agreed that their College supported flexible training arrangements (up 3%), with workplace unavailability the main reason for not accessing it.

It's striking to think that many current trainees weren't yet in medical school when a previous cohort of trainees – most now specialists - campaigned successfully for the Board to establish the MTS. Not all current trainees know the MTS was created for trainees, with trainees.

With six consecutive years' MTS results now at our fingertips, and data generated by more than 50% of trainees each year, we have the opportunity to examine the data closely. In this detail lies the evidence that can inform constructive change.

Dr Anne Tonkin AO Chair, Medical Board of Australia

#### INTRODUCTION

The Medical Training Survey (MTS) is a national, profession-wide survey of doctors in training in Australia. It is a confidential way to get national, comparative data to strengthen medical training in Australia. The MTS is conducted annually with doctors in training, with 2024 representing the sixth wave of data collection.

The objectives of the survey are to:

- promote better understanding of the quality of medical training in Australia
- identify how best to improve medical training in Australia, and

 identify and help deal with potential issues in medical training that could impact on patient safety, including environment and culture, unacceptable behaviours and poor supervision.

The Australian Health Practitioner Regulation Agency (Ahpra), on behalf of the Medical Board of Australia (the Board), commissioned EY Sweeney to undertake data collection and report on the results for the MTS.

#### **METHOD**

Data collection for the MTS involved receiving responses to an online survey from n = 24,812 doctors in training, with n = 23,859 responses eligible for analysis (i.e. currently training in Australia) between 4 August and 9 October 2024.

Different versions of the survey were used to reflect the particular training environment of doctors who are at different stages in their training. Doctors in training answered questions about their experiences in their workplace. This could be the doctor in training's current setting, workplace, placement or rotation, or might be a previous setting, if they have only been practising or training in their current setting for less than two weeks.

For this report, results for The Australasian College of Dermatologists (ACD) are presented at an overall level. To explore results within ACD further, please visit medicaltrainingsurvey.gov.au/results.

#### **INTERPRETING THIS REPORT**

This report provides key results based on n = 54 doctors in training at the ACD compared against national results (n = 23,859) of all eligible doctors in training (i.e. currently training in Australia).

Bases exclude 'not applicable' responses or where the respondent skipped the question. Data in this report are unweighted. Labels on stacked charts are hidden for results 3% or less. Results with base sizes of less than n = 10 are suppressed.

Data percentages displayed throughout the report are rounded to the nearest whole number. As such, if there is an expectation for a given chart or table that all percentages stated should add to 100% or nets should equal to the sum of their parts, this may not happen due to rounding.

# **OVERALL SATISFACTION**

Q34. Thinking about access to teaching and research in your setting, to what extent do you agree or disagree with the following statements?

#### THE FOLLOWING EDUCATIONAL ACTIVITIES HAVE BEEN USEFUL IN YOUR DEVELOPMENT AS A DOCTOR

ACD trainees were asked their level of agreement on whether an educational activity had been useful in their development as a doctor. Of the educational activities available, teaching in the course of patient care (bedside teaching) (92%), formal education program (86%) and multidisciplinary meetings (78%) were rated the most useful.

#### Formal education program^
